Field Notes on Marking

1. Introduction

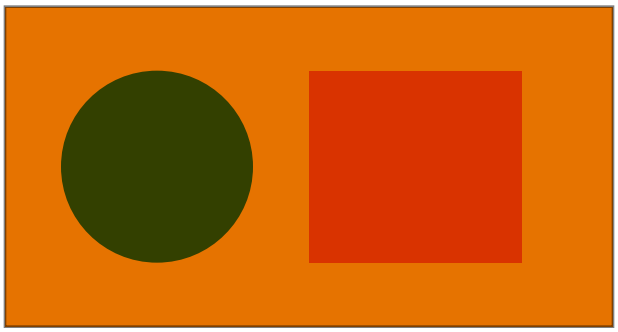
Field notes record what an observer saw and when. A good note is short and dated. Readers often mark the lines they want to keep with a pen.

2. Methods

We copied every note into a single notebook. ~~Duplicate notes were removed by hand.~~ Each page was checked twice by a second reader.

2.1 Sampling

Notes were sampled from three field seasons. The sample favours the summer months when most observers were active.

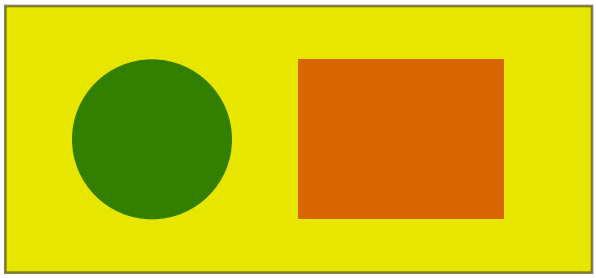


The trap shown above caught most of the moths in the study.

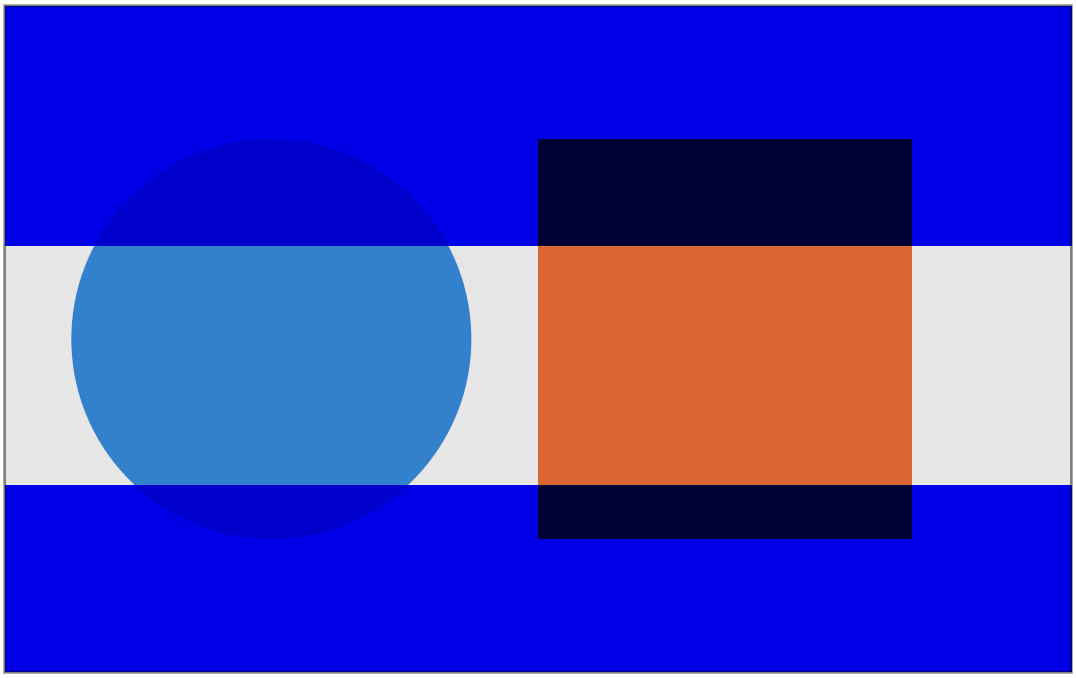
3. Results

3.1 Counts

Most notes were short. The median note had eleven words.



Longer notes came from the second season, when the observers had more time to write them up.

3.2 Errors


Some notes were dated wrongly. These were corrected from the weather records.
